

INTERNET ORGANISED CRIME THREAT ASSESSMENT (IOCTA) 2017

Report

IOCTA

The 2017 Internet Organised Crime Threat Assessment (IOCTA) reports how cybercrime continues to grow and evolve. While many aspects of cybercrime are firmly established, other areas of cybercrime have witnessed a striking upsurge in activity, including attacks on an unprecedented scale, as cybercrime continues to take new forms and new directions. A handful of cyber-attacks have caused widespread public concern but only represented a small sample of the wide array of cyber threats now faced.
